Final Robotics Challenge

Your robot just landed on an alien planet and its mission is to explore the terrain. Command your robot to execute the following steps:

- 1. Beginning at the "start" position, write a program to navigate the robot safely through the maze.
- 2. At the end of the maze, your robot encounters an alien, stops in front of him but does <u>not</u> knock him down.
- 3. Put a big smile on the face of your Robot to show that it is friendly.
- 4. Your Robot Ambassador greets the Alien with a friendly "hello".
- 5. Your Robot Ambassador then puts on a sad face to show it regrets having to leave.
- 6. It says "goodbye", navigates the maze again and returns to where it started.
